

SMT celebrates the opening of its new plant

In order to expand manufacturing capacity, SMT has built Plant 3 in Wertheim, right on the river Main. A new production area of 805 m² and the integration of state-of-the-art hoisting technology in the form of a gantry crane mean that the whole manufacturing concept has been redesigned. A total of eight new jobs have been created. The colleagues can enjoy state-of-the-art workstations and an optimally equipped machine park. For all our customers this expansion in capacity means that they can expect shorter delivery times and even better possibilities of fulfilling special requirements quickly, easily and economically.

The SMT Technology Congress 2008 was taken as the occasion to simultaneously put the new technology centre into operation. Bright, light-flooded rooms provide the perfect ambiance for the presentation of the technically sophisticated Thermal Systems from SMT.

Both buildings are equipped with the very latest energy and communication technology. The company philosophy – save resources by minimising consumption and using energy efficiently – applies not only to the machines but to all buildings as well.

Opening of plant 3:
(from left to right)

- Hans-Günter Ulzhöfer, CEO SMT Wertheim
- Stefan Mikulicz, Mayor of Wertheim
- Christian Ulzhöfer, Assistant to the Management SMT Wertheim
- Heidi Ulzhöfer, Account Department/Human Resources SMT Wertheim
- Caroline Ulzhöfer, Sales Assistant SMT Wertheim
